Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 and 4-9 are rejected under 35 U.S.C. 102(b) as being anticipated by European Patent No. 815,925 (hereinafter "EP '925").

The European Patent discloses an sulfate-storing and reducing catalyst comprising a porous catalyst support (e.g., alumina, titania, a mixture of alumina and silica, a mixture of alumina and zirconia, etc., considered to read upon "A oxide"), and, as the sulfate-storing and reducing ingredient, copper. See page 4, lines 20-51 of EP '925, which also discloses the preference that sulfates produced from an exhaust gas be decomposed at temperatures of 500°C or less, preferably in a temperature range of from 300 to 500°C (lines 27-35; considered to read upon claims 8 and 9)

In view of these teachings, EP '925 anticipates claims 1 and 4-9.

3. Claims 10-12 and 14-22 are rejected under 35 U.S.C. 102(b) as being anticipated by European Patent No. 888,816 (hereinafter "EP '816").

EP '816 teaches exhaust emission control catalysts (with which it is possible to efficiently remove NOx in exhaust from a diesel engine, and suppress the oxidation of

Application/Control Number: 10/748,594

Art Unit: 1755

SO₂ in the exhaust, thereby decreasing the amount of particulate matter in the exhaust; see page 3, lines 33-35; considered to read upon claims 21 and 22) capable of efficiently removing nitrogen oxide, said catalysts comprising copper and praseodymium (in oxide form, see page 3, lines 37-51) as catalytic components, and, as support, at least one of zirconia and zeolite (considered to read upon "A oxide" in claims 16-19). See page 3, lines 16-20 and page 4, lines 5-40 of EP '816. This disclosure is considered to read upon claims 10-12, and catalysts (a) and (b) in claims 16-20.

The Examples of EP '816 depict embodiments in which exhaust gases were treated with the catalysts at temperatures of 350°C, 450°C, and 550°C. This disclosure is considered to read upon claims 14-16.

In view of these teachings, EP '816 anticipates claims 10-12, and 14-22.

Allowable Subject Matter

- 4. Claim, 2, 3, and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach or suggest the claimed copper loading mol percentage ranges, as recited in claims 2 and 3. EP '925 at page 4, lines 44-51 disclose that the sulfate-storing and reducing catalyst component (copper) is desirably present in

loading amounts ranging from 0.05 to 2 moles with respect to one liter of the resulting sulfate-and storing reducing catalyst.

The prior art cited does not teach or suggest "mixed manganese-yttria" as an exemplary catalyst composition, although EP '816 at page 4, line 50 to page 5, line 4 discuss exemplary sources of yttrium as a catalyst component.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia L. Hailey whose telephone number is (571) 272-1369. The examiner can normally be reached on Mondays-Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo, can be reached on (571) 272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group 1700 Receptionist, whose telephone number is (571) 272-1700.
